Abstract of EP1103428

The front bumper arrangement (1) is inside a shell (2). It includes spacers (3) and stop plates (4). A transverse bearer (5) is connected to the longitudinal bearers of the bodywork. There is a transverse beam (6) below the bearer, which has a deformation region connected to the spacers extending over its entire length, a deformation region in front of this, a reinforcement region and a frontal foam body region (19).
